Interior Design Collaborative – Oregon

From health concerns to safety issues, ergonomics to acoustics, choosing the best flooring for healthcare spaces is crucial. Mohawk is proud to offer an evidence-based design presentation to inform and empower facility managers and hospital designers to ensure they are designing with optimal health and safety concerns in mind.

This course will focus on aspects of HCAT: Healthcare Aptitude Test. HCAT is a research based look at infection control, noise management, ergonomics, safety and maintenance and how they influence patient outcomes, caregiver performance and the financial impact on hospitals.

UPCOMING CEU SESSION EVIDENCE BASED DESIGN FOR HEALTHCARE

How your specifications affect the health, safety and welfare of patients and healthcare professionals
